Cembrit Patina Cembrit Patina Rough ^{NEW}

A natural choice for your facade

A classic design with startling aesthetics

Both Cembrit Patina & Cembrit Patina Rough exhibit the natural characteristics of fibre cement.

The boards have the appearance of concrete but with the unique textural delicacy of fibre cement. Each board is unique and their visual appearance is brought to life as the weather and lighting conditions change – offering the facade an unparalleled, dynamic visual appeal.

Cembrit Patina boards are available in two natural finishes; textured and sanded surface (Cembrit Patina) and a new ‘velvety’ and structured surface (Cembrit Patina Rough).

Exceptional durability

Cembrit Patina boards combine robustness and ease of use with elegant and ever-changing aesthetics. Cembrit Patina is a homogeneous facade board. As an uncoated genuine material, Cembrit Patina is closer in appearance to natural and monolithic facade boards than those with applied surface coatings, but has the benefit of fibre cement’s low weight per m². Additionally, as there is no surface coating, minor damage is less visible than on coated facade boards.

Thanks to our in-house expertise, Cembrit has captured the intrinsic quality of fibre cement, preserved it and re-invented it to make it a unique visual feature.

Natural Building Material

Cembrit Patina & Cembrit Patina Rough boards are made from natural materials: cement, mineral fillers and water, to which organic fibres are added.

Over time, the boards will patinate, giving the facade a characterful, natural look.

The result is a virtually maintenance-free facade with exceptional durability - that develops character and grace with age.

A key advantage of the hydrophobized surface of the boards is their strong dirt, stain and water-repellent properties, as well as their resistance to all kinds of weather conditions: frost and thaw, heat and extreme rainfall.

Easy to install

Installers and contractors appreciate the ease of handling, workability and simplicity and speed of installation of Cembrit Patina boards.

This ensures shorter construction times and lower construction costs.

With Cembrit Patina & Cembrit Patina Rough you give creativity free rein. Strong, versatile and excellent value for money, Cembrit Patina is an autoclaved cladding, so cut edges do not need to be sealed as air cured claddings do. Again, this significantly reduces time on site or at the fabricators cutting facility. The more complicated the facade, the greater the advantage becomes.

Cembrit Patina

Cembrit Patina has a natural, textured surface. The fibres and natural characteristics of the fibre cement are visible and the sanding lines on the surface of the boards give an extra tactile and visual impact. As the seasons change and the years pass, the natural ageing of the fibre cement leaves subtle traces on the surface, and the facade will gradually acquire a distinctive patina.

Vibrant colour options

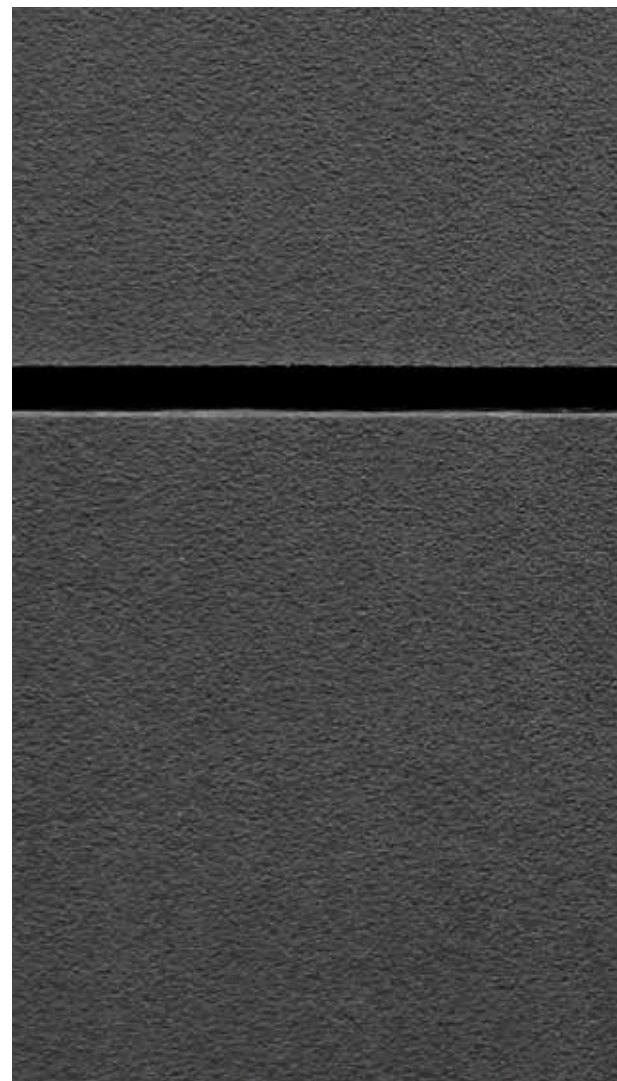

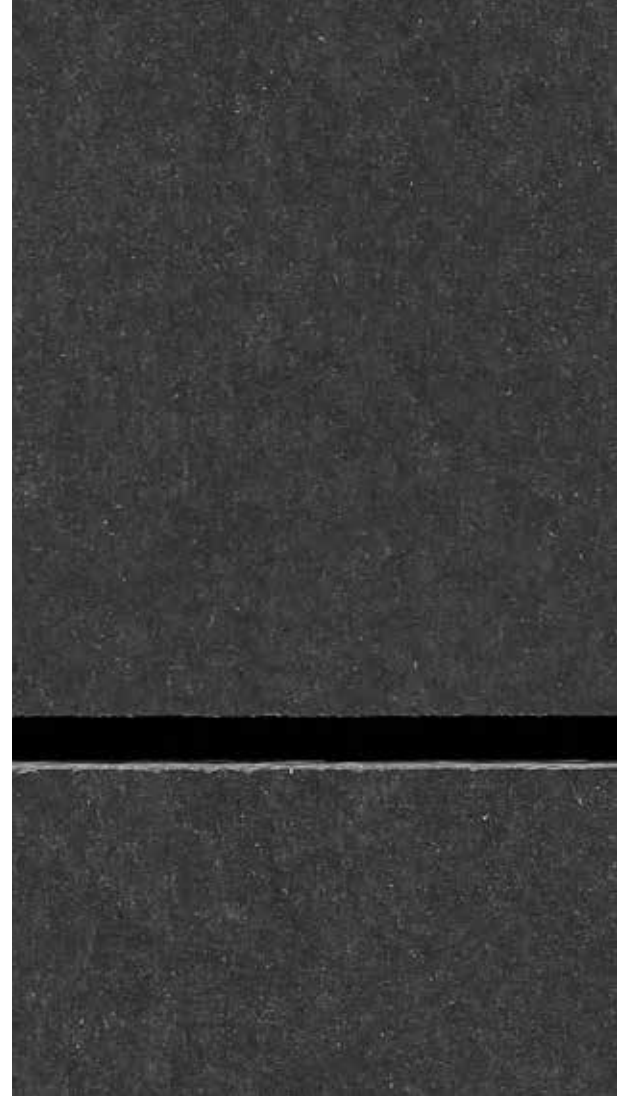

Cembrit Patina Rough

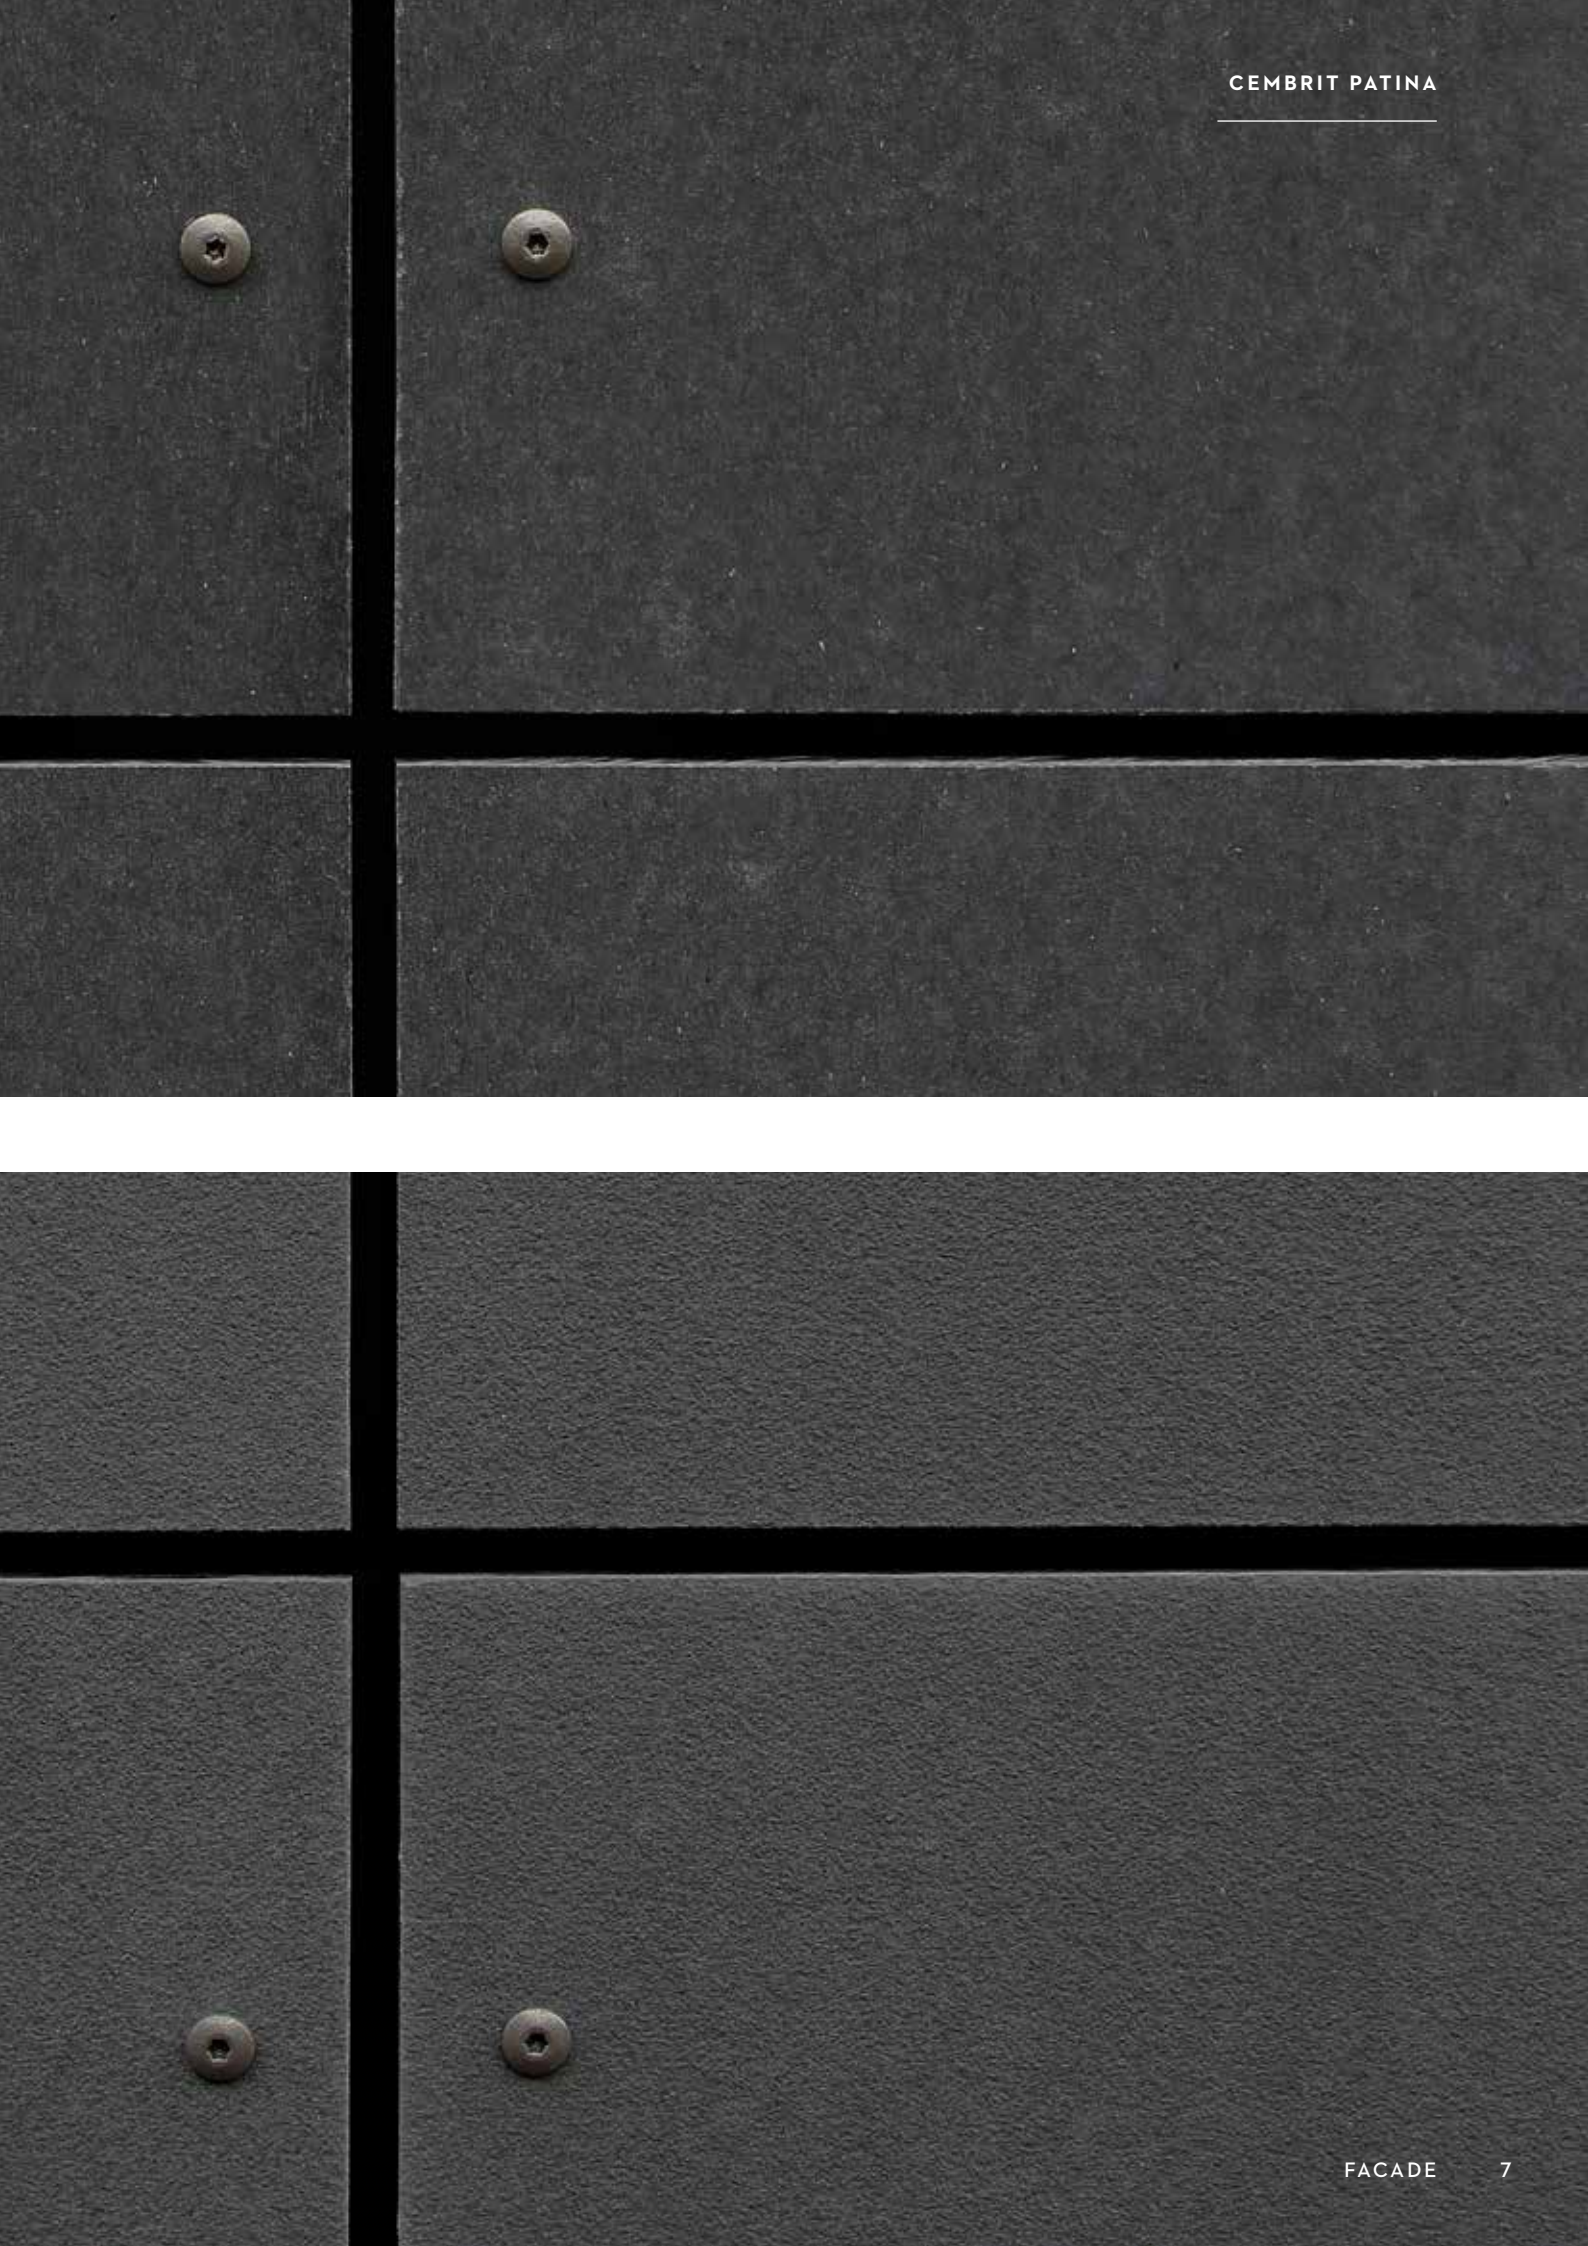

Cembrit Patina Rough has a velvety, structured surface – as if formed over time by Nature. This appearance will add a mineral, naturally and subtly eroded surface finish to your facade, as if it were built using natural materials – for instance, naturally aged sandstone. The sandblasted surface will also give your facade a dynamically changing appearance throughout the day depending on external light and viewing angle. As with Cembrit Patina, Cembrit Patina Rough will patinate with time - enriching its natural appearance.

Cembrit is one of the leading European manufacturers of multi-capability fibre-cement building products. Our products and solutions add exciting new design opportunities for moulding attractive, durable settings for people's lives. But Cembrit is more than mere products. We also help make all kinds of design and construction projects easier - as well as more profitable, inspiring and effective.

And for us, all construction also involves building relations with people, making your day better, and helping you make the day better for others. Making it a day to remember.
